

WHEN-TO-WAKE ABI

Population

Adults with acute brain injury

Mechanical ventilation
Repeated stable decisions

Sequential strategy contrast

Early de-escalation within 6 h

versus

Continued sedation for 24 h

Clone-censor-weight estimation

Day-7 liberation

MIMIC-IV +7.7 pp

95% CI 4.4 to 11.0

eICU proxy +4.0 pp

95% CI -2.5 to 11.1

Observational associations; eICU used a non-equivalent ventilation-end proxy.
